

ZYTRONIC DATA SHEET

ZXY150™

The ZXY150™ controller is designed to support our small format MPCT™ multi-touch sensors and is capable of detecting up to 10 simultaneous touches

ADVANTAGES

- 10 independent touch points
- Supports sensors sizes 7" - 21"
- Enables rapid touch detection (<10mS)
- Support for Win7, 8 & 10, as well as Linux 3.5.1+ Kernels (10 point touch)
- Detachable and completely independent of the touch sensor
- Output protocol available on request
- Range of other operating systems supported

OPERATION

The MPCT™ touch sensor is divided into an X - Y matrix of sensing cells, using an array of embedded 10µm copper electrodes, which are near invisible to the human eye on a powered display. These electrodes are connected to a controller board and a charge is applied to the array.

When a finger or conductive stylus approaches the surface of the sensor a change in the charge is detected in the nodes immediately beneath adjacent cells; the position is then determined by the controller and its firmware. Unlike conventional capacitive systems the active component of MPCT™ can be embedded behind a thick front substrate, ensuring protection, long life and stability.

The unique sensing characteristics of MPCT™ sensing eliminates the need for an operating force, providing users with similar levels of touch sensitivity as experienced with the latest smart phones and tablet PC's but on a much larger scale, and in any environment or location.

APPLICATIONS

Zytronic's Multi-Touch PCT™ products meet the latest requirements for multi touch and multi user interactivity, while still maintaining the high levels of durability that Zytronic's products are known for.

The controller has been designed to provide plug-and-play multi touch support with the latest operating systems and application software packages such as NUI TEQ's Snowflake, Omnivision's Omnitapps and Touch Tech's LIMA.

They are the perfect choice for multi touch industrial, self service and medical applications.
